Github: https://github.com/satishwaran-s

Robotics systems engineer with experience in system integration, deployment and validation of robotic systems across software, hardware and field operations. Focused on improving real-world reliability by continuously feeding deployment insights back into engineering development

EDUCATION

Bachelor of Engineering with honours in Robotics Systems Sept 2021 – Apr 2025

Singapore Institute of Technology

Diploma in Mechatronics and Robotics Apr 2015 – Apr 2018

Singapore Polytechnic

WORKING EXPERIENCE

Vilota July 2026 – Present

Robotics Engineer

- Act as the internal technical product owner for features and services that enhance the product's perception and localisation capabilities and reliability
- Manage a key customer account , translating field requirements into deployable features and updates
- Maintain and develop production software and tooling to improve quality control and productivity of device production operations

Aliciabots May 2025 – June 2026

Robotics Engineer

- Owned end-to-end development of a robotic product family spanning software, electronics, UI and deployment readiness
- Designed and implemented remote update and system cloning architecture enabling scalable fleet updates without physical access
- Acted as primary technical interface for deployment and operations teams, resolving field issues and ensuring system stability across deployments

LionsBot International Pte Ltd Jan 2024 – Dec 2024

Software Engineer (Autonomy) Intern

- Developed and calibrated sensor systems to improve robot perception and overall system performance
- Improved perception and sensor fusion modules using computer vision and deep learning techniques
- Optimised navigation and planning algorithms to improve robustness and efficiency of autonomous systems

LionsBot International Pte Ltd Sept 2020 – Sept 2021

Robotics Technologist

- Led on-site robot deployments including mapping, zoning and system configuration in customer environments
- Acted as interface between customers and engineering teams, translating operational feedback into engineering inputs
- Supported commissioning and trials, ensuring successful deployment and alignment with customer requirements
- Diagnosed and resolved field issues, improving system reliability in real-world environments
- Delivered user training and operational support to improve system adoption and usability

SKILLS AND PROFICIENCIES

Technical Skills

- Programming: Python, C, C++, MATLAB
- Robotics: ROS/ROS2, Gazebo, RViz
- Perception & AI: OpenCV, TensorFlow, YOLOv5
- Mechanical & Systems Engineering: SolidWorks, Fusion360, circuit design, Capella
- Productivity & Documentation Tools: Jira, Github

Licenses and Certifications

- Certified Scrum Product Owner (Scrum Alliance)
- Python Data Structures and Algorithms (LinkedIn Learning)
- Agile Project Management (Coursera)
- Foundations of Project Management (Coursera)
- Project Execution: Running the project (Coursera)
